

The CPN can help you get lean after Christmas

The CPN is helping to demonstrate how CLIP (Construction Lean Improvement Programme) is assisting construction companies to put lean thinking into practice. In 2005 the CPN will be holding a number of workshops up and down the country with speakers from participating companies sharing their experience. CLIP is about "Practical steps to More Profit and Greater Productivity". It provides help to actually change things – not just training or "business process" consultancy. Construction companies throughout the UK have achieved improvements of up to 50% on quality, cost and delivery by implementing CLIP. Make 2005 a leaner year by finding out how you can increase productivity and profitability with CLIP at CPN workshops.

Construction Lean Awareness Workshop

Profit from Process Improvement

in association with

22 February 2005

London

09:00 – 17:00

CONSTRUCTION LEAN AWARENESS WORKSHOP (CLAW)

Overview

“CLIP produced significant improvements across key areas and will be fundamental in how we develop our business over the coming years”

Tony Hyde, Thomas Vale Construction plc

“We improved productivity by 17% - particularly good as our target was 5 to 10%”

Ron Gatenby, Simpson (York) Ltd

Use the innovative Construction Lean Improvement Programme (CLIP) to make your operation more effective and profitable.

- Achieve higher levels of customer satisfaction
- Improve the cost, quality and delivery of your service
- Learn through intensive workshops how to apply practical principles to your own situation
- Benefit from tools and advice to equip you to start moving forward at the sharp end of construction

This training session is vital to those who wish to fully understand the potential available from lean construction techniques. Much has been written about lean construction and there is a great deal of confusion about the principles. This session has been designed to cut through the confusion and get to the heart of the issues and how the principles of lean applied through CLIP can make a real difference to your own situation. This is not a generic seminar, but an intensive, practical training day where you will leave better equipped to manage your future construction projects in a more effective way. You will learn how the CLIP programme can assist in reducing costs, eliminating waste and delivering projects on time. CLIP is managed by BRE, the construction industry's premier independent provider of solutions in research, consultancy, testing and certification.

Who should attend?

This CPD approved workshop has been designed to specifically benefit those who are actively engaged in delivering medium and large scale construction projects. Those who would particularly benefit include senior managers and project managers within medium/large construction businesses, operating regionally. Equally, construction clients will learn a great deal about how to work with their supply chain to achieve mutual objectives through implementation of CLIP principles.

Lean Construction – profit from process improvement

What you will get out of it

- An understanding of the power of lean principles and how their application can create greater profitability without simply 'cutting costs'
- An awareness of how lean thinking and applying CLIP principles will directly benefit your own business and construction operations
- An ability to identify opportunities to apply lean thinking principles where they will be most effective
- Full understanding of how CLIP works and how to access its resources and support.

Opportunities also exist to bring the CLIP training course direct to your organisation. We are able to deliver the course to groups of up to 25, exclusively for your key management or integrated project teams. For more details call Margaret Curtis Tel 01923 664228

Workshop Objectives

As a result of the day, attendees will be able to:

1. Describe the power and breadth of lean (in terms of the 5 core elements)
2. Describe how lean could benefit their company
3. Identify opportunities to apply lean in their own organisation
4. Describe how to access CLIP

This training session (09:00 – 17:00) will cover Lean, Value and Value Streams, Flow and Pull, Perfection and CLIP. Places are limited to 25 per course. These are available on a strictly first come first served basis.

About the trainers:

Tim Foster is a Director of RDI, a management development company that works to improve performance through people. Tim has conducted performance improvement projects with more than 100 companies and is highly experienced in delivering programmes for the construction industry. Tim is a Chartered Mechanical Engineer, member of the Institute of Mechanical Engineers and a Fellow of the Institute of Management Consultancy.

Trevor Sansom is one of our CLIP engineers working directly with the construction industry to deliver process improvement masterclasses; introduce lean concepts and bring about significant improvements to quality cost and delivery. Trevor's background also includes work on implementing lean techniques in the defence, automotive and food industries.
